

Gillmore Apparatus

Used to determine the setting time of cement.

The vertical support shaft has a device to maintain the horizontal arms in alignment.

The support assembly is adjustable.

The two steel needle weights are calibrated to meet specifications.

The needle points are manufactured from stainless steel.

The initial setting needle is 2.12mm in diameter and weighs 113g.

The final setting needle is 1.06mm in diameter and weighs 453.6g.

Total weight: 3Kg
